

## Only part of my content is showing up and the rest is cut off

---

There are times when you may want to scroll the entire contents of an article but you are noticing that your article is being cut off. This is due to the fact that with the standard MoeScroll setup the 'Fixed Slide Width' and 'Fixed Slide Height' options are set to 'Yes'. These settings tell MoeScroll that every slide (article) should be resized to fit to the exact size of the scroller window and not the size of the content.

So, if your scroller is set to scroll vertically (Y) and your text is cut off, simply set the 'Fixed Slide Height' option of the module to 'No'.

If you are using a horizontal scroller (X), set the 'Fixed Slide Width' option to 'No'.
