When you install MoeScroll or another MoeDesigns product, the module, and Joomla 1.5, are set to use the MooTools JavaScript library. Certain module like the SuckerFish module use a different JavaScript library known as jQuery. Unfortunately, MooTools and jQuery do not play nice together and can cause conflicts that can break modules. Fortunately for you, MoeScroll offers you the ability to choose between MooTools or jQuery! Below are the steps to setup MoeScroll to use the jQuery library.

Step 1: Login to your Administrator Panel of your Joomla 1.5 site.

Step 2: Click on 'Extensions' then 'Module Manager'

(Note: Steps 3 - 6 should be repeated on each instance of MoeScroll that you have enabled)

Step 3: Click on the instance of MoeScroll Advanced that you are having the problem with

Step 4: Click on the 'Advanced' tab located at the bottom of the screen in the right hand column.

Step 5: Set the following settings:

- JavaScript Library: jQuery
- Insert MooTools Library: No
- Insert jQuery Library: Yes

Step 6: Click the 'Save' icon at the top of the screen.

Step 7: View your site from the front end and refresh the page.

Step 8: Enjoy your scroller!

If you experience any problems or do not feel comfortable performing this task on your own, please submit a ticket to our support staff with the URL of your site and a temporary administrator login and password so we can get you setup and running.
